

NSF INTERNATIONAL THE MOST TRUSTED NAME IN FOOD SAFETY™

Increasingly complex supply chains, new food laws, and the proliferation of food and ingredient sources present significant safety and quality challenges to the food industry today. NSF International, *The Most Trusted Name in Food Safety™*, is helping food companies navigate this complex business and regulatory environment with a complete portfolio of global food safety and quality services.

COMPREHENSIVE FARM TO FORK SERVICES

Many food industry service providers talk about offering “farm to fork” services. NSF International not only does it, but uses sector-specific experts at each link in the supply chain. Our highly experienced food safety experts and auditors are located everywhere you need us to be, in more than 150 countries.

NSF service offerings include training, consulting and technical services, auditing, system and product certification, testing, and data management. These offerings are available individually or as part of a customized package to address your specific business needs.

Training – With our team of active food safety and public health professionals, we develop and maintain educational materials that are up to date with the most relevant industry practices and trends. Across the globe, NSF hosts a network of public or customized training courses for company representatives to stay current with the changing regulations and requirements in the food safety industry.

Consulting and Technical Services – Our experienced consulting team specializes in providing pragmatic solutions to managing compliance, developing systems designed for the ‘real world.’ We work with many global clients to provide a variety of services including risk assessment, HACCP development and validation, challenge testing, allergen control management, food defense and bio-security planning.

Auditing – NSF has worked diligently to build the most qualified and calibrated auditor network in the food industry, with sector-specific expertise, capable of supporting your international food safety program. With most having 20 or more years of food industry experience, NSF auditors bring a wealth of experience supporting clients in all key industry sectors, from agriculture to processing, storage to seafood, and beyond.

Certification – NSF certification of products and systems are backed by more than six decades of experience to ensure an efficient and comprehensive process.

Product Certification - NSF tests and certifies a wide range of products used across the food processing and foodservice industries including commercial foodservice equipment, consumer/home appliances, Nonfood Compounds used in food processing, Bottled Water, Ice and Flavored Beverages and Organic and Gluten-free products.

Food Safety Systems Certification – An accredited Certification Body (CB) for Global Food Safety Standards (GFSI), NSF International provides more certifications to Global Food Safety Standards than any other certifier. With more than 60,000 certifications performed annually, NSF enables companies around the globe to demonstrate compliance to SQF, BRC, IFS, FSSC 22000, GLOBALG.A.P. and CanadaGAP.

Testing – NSF’s food safety programs are supported by NSF’s ISO 17025-accredited laboratories in the U.S., China and Europe, and highly qualified microbiologists, toxicologists, chemists and engineers who ensure testing is performed accurately, quickly and consistently.

Data Management - NSF understands the competitive advantage that comes with secure and effective data management, and we built our proprietary NSF Online system with this in mind. This web-based IT system provides a wealth of intelligence upon which you can confidently make data-driven business decisions.

NSF offers a multitude of services that can help your business become more efficient and more profitable. Bring us your challenge and let’s work together to find the best solution.
